

Design of an own WWW-Homepage

PPS SS 2003

Prof. Bernhard Plattner,
Hasan Hasan,
Károly Farkas

Outline for Today

- Administrative details
- Goal of the Praktikum
- Technical requirements
- Introduction to Webpage design
- Practical exercises
 - Creating the first homepage
 - Publishing the page created previously

Administrative Details

- Assistants
 - Hasan Hasan: hasan@tik.ee.ethz.ch, ETZ H84
 - Károly Farkas: farkas@tik.ee.ethz.ch, ETZ G64.1
- Dates of the praktikum afternoons
 - 07. April 2003, 14.15 - 17.00, ETZ F76.1
 - 14. April 2003, 14.15 - 17.00, ETZ F76.1
 - 05. May 2003, 14.15 - 17.00, ETZ F76.1
 - 12. May 2003, 14.15 - 17.00, ETZ F76.1
 - 19. May 2003, 14.15 - 17.00, ETZ F76.1
 - 26. May 2003, 14.15 - 17.00, ETZ F76.1

Administrative Details (cont'd)

- Date of final presentation
 - 30. June 2003, 14.15 - 17.00, ETZ F76.1
- Praktikum Homepage
 - <http://www.tik.ee.ethz.ch/tik/education/lectures/PPS/web/SS03/>
- Praktikum mailing list
 - pps-web@tik.ee.ethz.ch
- Language of the Praktikum
 - English ☹

Goal of the Praktikum

- To become acquainted with the basics of WWW technology
- To be able to construct an own Homepage
- To be able to present this Homepage
 - Criteria to the final presentation
 - Should be clear by the end of the Praktikum
- To be able to evaluate others' work
 - Evaluation will be done by the participants themselves

Technical Requirements

- To join the praktikum
 - it's required:
 - a laptop with text editing and Webpage browsing capabilities
 - it's recommended:
 - wireless LAN or 10/100 Mbit/s Ethernet LAN (UTP) interface
- Moreover, the working of the student account on the computer infrastructure of ETH should be found out and checked

Introduction to Webpage Design

- Web history
- Terminology
- Using the Web
- Creating a Webpage

Web History

- Original motivation
 - To invent a globally distributed hypermedia system for better info exchange among researchers at CERN
- Idea inventor
 - Tim Berners-Lee, 1989
- Milestones
 - First working prototype: end of 1990
 - First real browser (NCSA's Mosaic): 1993
 - Netscape Corp. was founded: 1994
 - World Wide Web Consortium was founded: 1994
 - Microsoft released IEv1.0: 1995

Terminology

- User
 - Human being which interacts with the web through some kind of program
- Browser
 - Program which is used to access web servers and displays documents retrieved from them
- Client
 - Program which accesses web servers (eg., browser, search engine, etc.)
- Server
 - Server program which stores documents

Main Components of the Web

- URI
 - Uniform Resource Identifier: How to name a document
 - <http://www.tik.ee.ethz.ch/>
- HTTP
 - Hypertext Transfer Protocol: How to get a document
- HTML
 - Hypertext Markup Language: The document format for hypertext

URI

- URI : URN (Uniform Resource Name) or URL (Uniform Resource Locator)
- URL Syntax
 - scheme ":" scheme-specific-part
- Scheme
 - ftp, port #: 21
 - http, port #: 80
 - https, port #: 443
 - nntp, port #: 119
 - mailto
 - telnet, port #: 23
 - ...

URL Scheme-specific-part

- Specific syntax
 - "://" [user[":"pass]"@"]host[":"port]"/"url-path
 - eg.: `http://joe:cool@www.ethz.ch:80/~joe/hidden`
- General syntactical rules
 - percent sign: %
 - escape character
 - hierarchical forms: /
 - delimit hierarchical substrings
 - hash sign: #
 - delimit an object reference from a fragment id
 - query strings: ?
 - Delimit the boundary between the id of the object and a query on that object

Host Name Resolution

- Host name: well specified name
 - fully qualified domain name or
 - IP address in its decimal form
- In case of domain name
 - using Domain Name Service (DNS)

HTTP

- Hypertext Transfer Protocol
 - How to get a document?
 - Text based request/response protocol between the client and the server
 - Uses TCP (Transmission Control Protocol)
- HTTP history
 - HTTP/0.9: 1992
 - HTTP/1.0: around 1996
 - HTTP/1.1: 1997

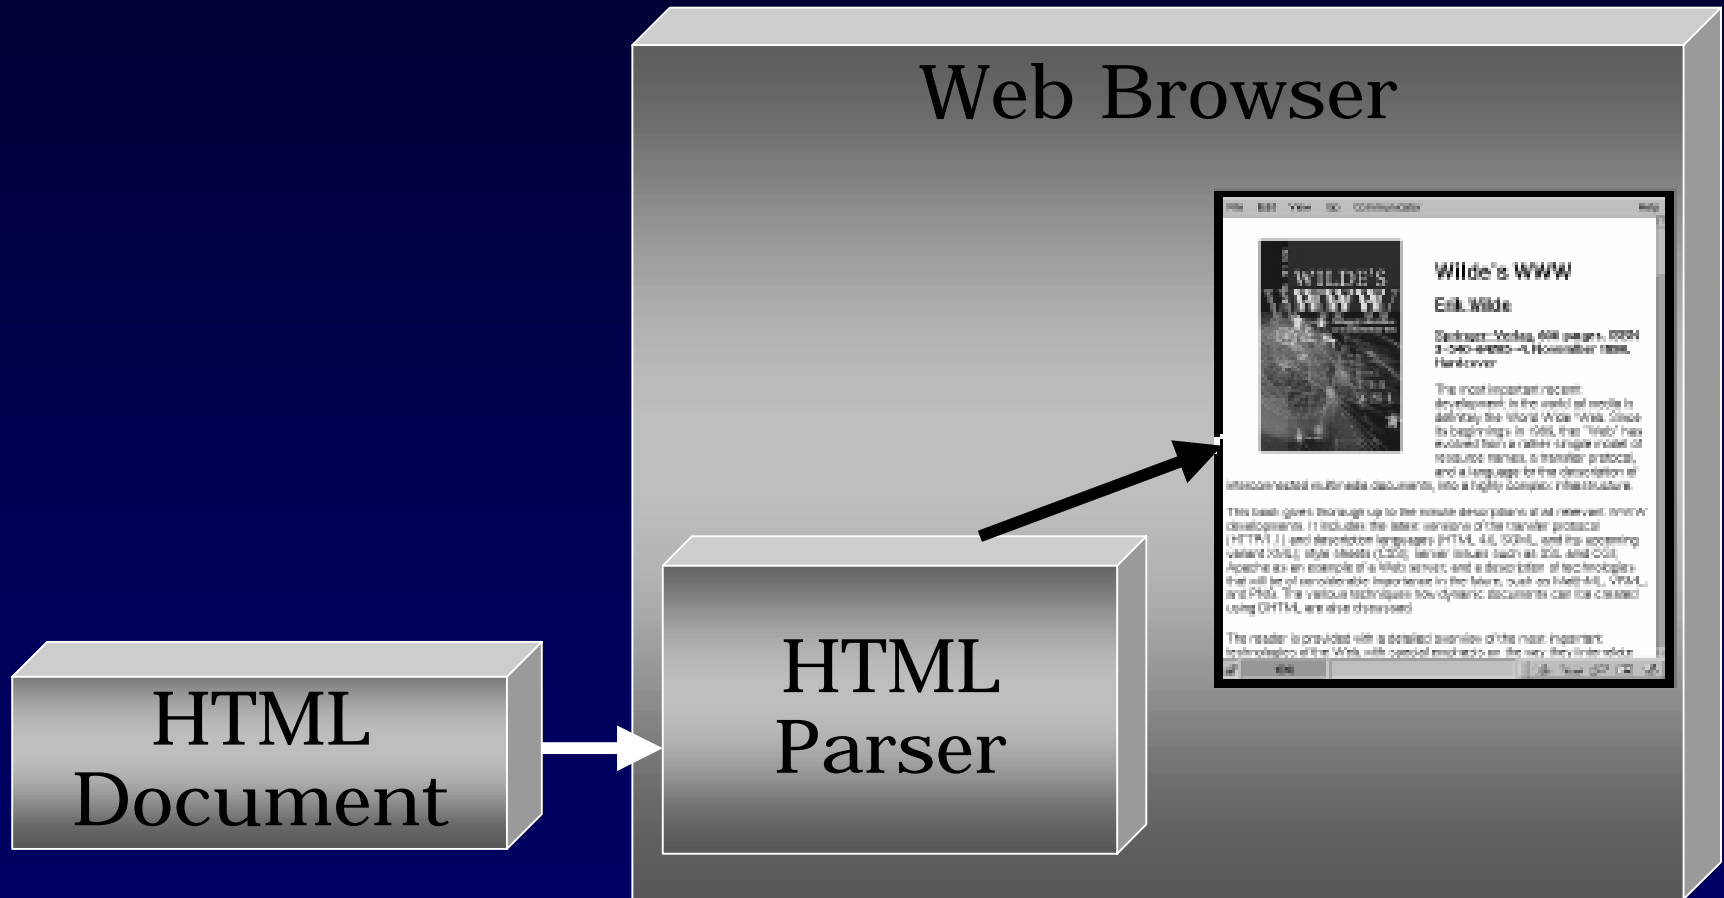

Creating a Webpage

- Content of a general Webpage
 - Textual information
 - Navigation aids
 - Images
 - Multimedia materials
 - Links to other materials
 - Data posting forms
 - Contact info (eg., email address)
 - Dynamic content (eg., from database)
 - ...
- Basic tool: HTML-Hypertext Markup Language
- Current version: 4.0 (since 1997)

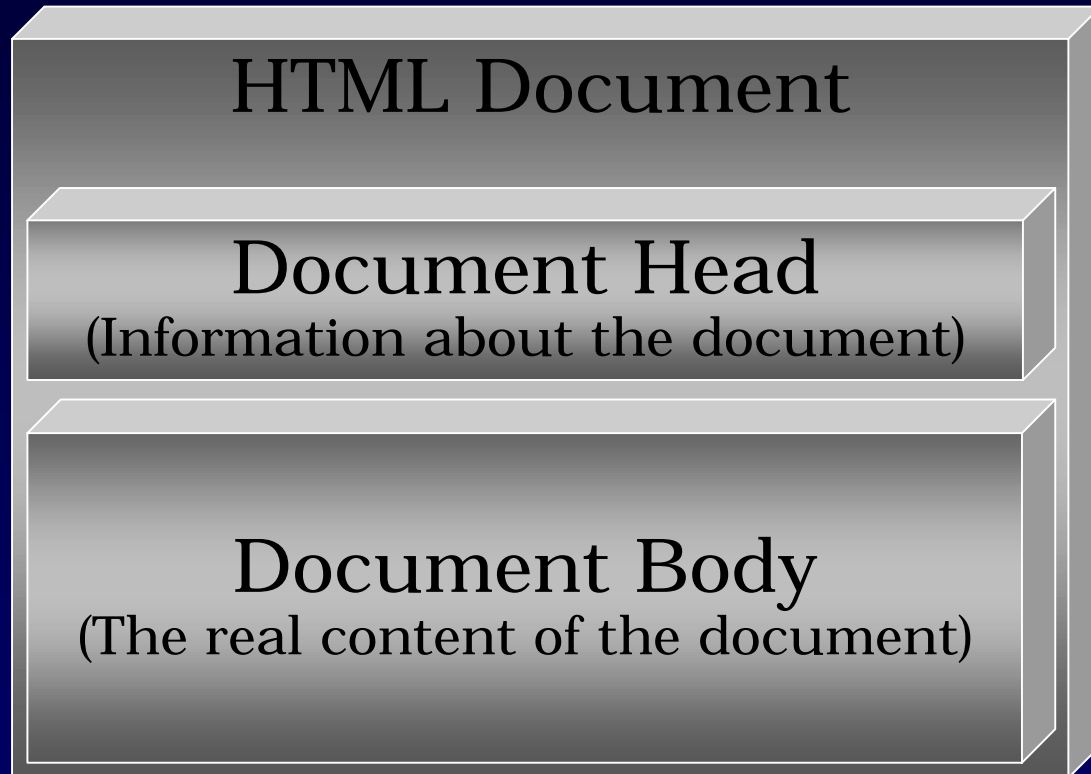

But how can we
carry out this?

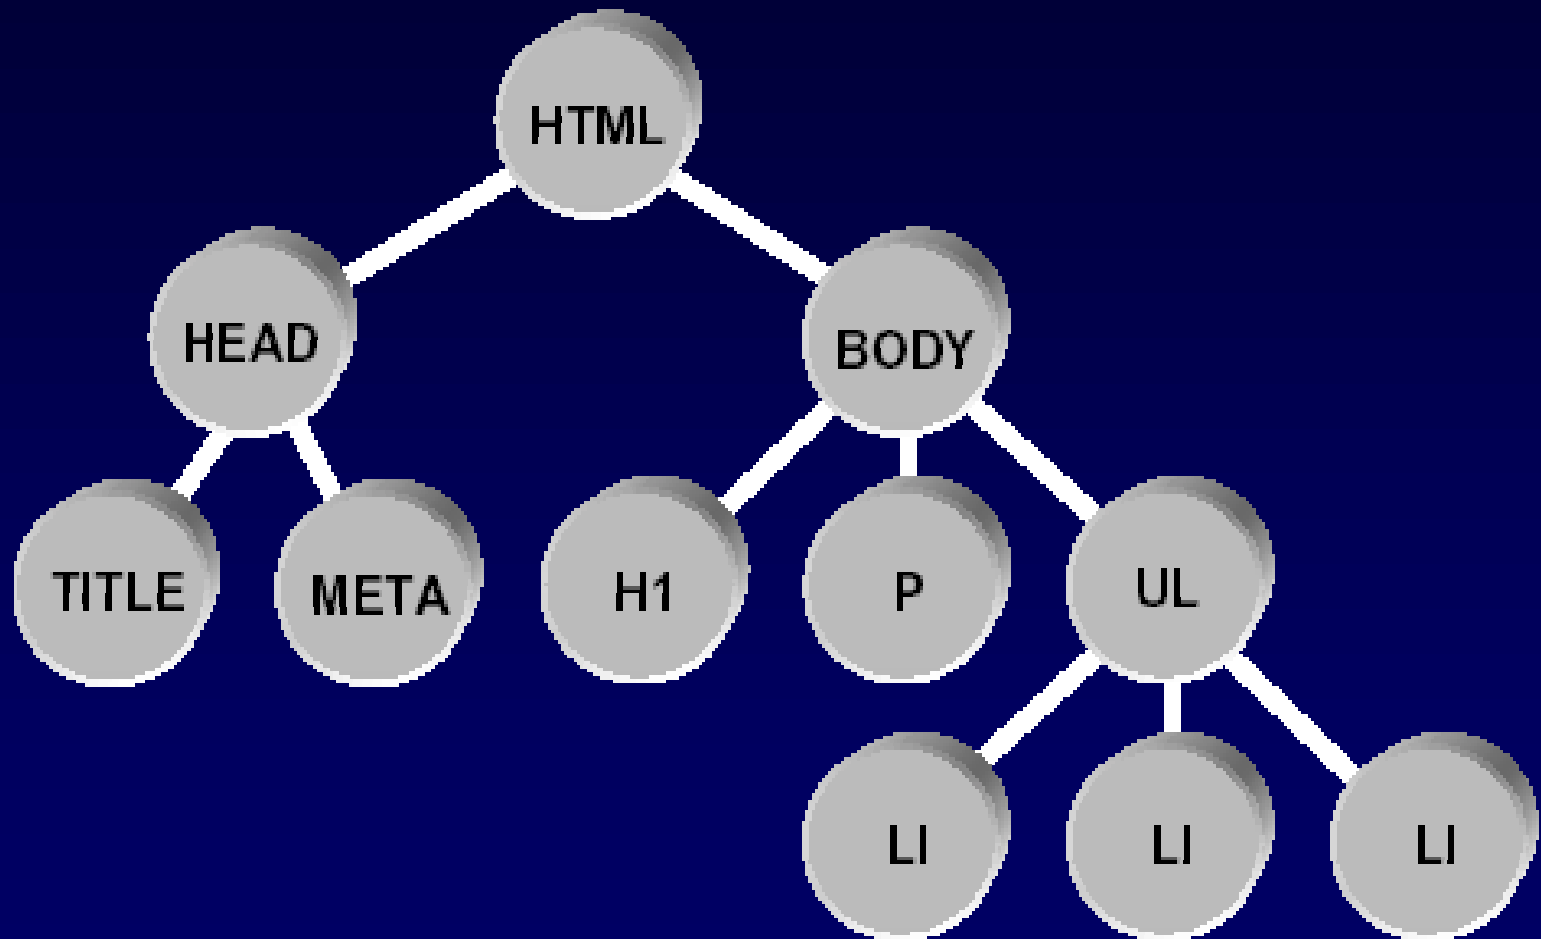

Visualizing a Webpage

General Structure of a Webpage

General Structure of a Webpage (2)

General Structure of a Webpage (3)

- HTML
 - The file contains HTML-coded information
- Head
 - Contains info about the document
- Title, Meta
 - Identifies the document with a 'title' and occasionally contains some additional meta info
- Body
 - Contains the content of the document
- Hx, P, UL, ...
 - Header format, paragraph, list, ...

HTML Basic Syntax

- Fundamental components: *elements*
 - Eg., head, table, paragraph, list, etc.
- To denote elements
 - Use tags: "`<tag_name>`"
 - Tags are usually paired: `<H1>` and `</H1>`
 - Some elements may include an attribute
 - eg.: top, middle or bottom as alignment
 - HTML is **not** case sensitive: `<title>` = `<TITLE>`
- Minimal required elements to a valid Webpage
 - `<HTML>`, `<HEAD>`, `<TITLE>`, `<BODY>` end their end pairs

Creating Our First Webpage

```
<html>
<head>
<TITLE>A Simple HTML Example</TITLE>
</head>
<body>
<H1>HTML is Easy To Learn</H1>
<P>Welcome to the world of HTML. This is
the first paragraph. While short it is
still a paragraph!</P>
<P>And this is the second paragraph.</P>
</body>
</html>
```

Editing a Webpage

- Using a plain text editor
 - Notepad, vi, emacs, ...
- Using a WYSIWYG (What You See Is What You Get) editor
 - Netscape Composer
 - Microsoft Frontpage
 - Adobe PageMill
 - ...

Publishing Our Homepage

- Information for D-I TET students
 - <http://computing.ee.ethz.ch/www/homepage.en.html>
- Information for D-I NFK students
 - <http://www.isg.inf.ethz.ch/services/index.html>
